

We are looking for a 2-page, PDF snippet of code and output in either Python or R. The subject matter of the code is irrelevant.

We are looking for the following in your code (see below). Please note your code does not need to contain all of the below. If you feel inclined, you can also include a commented-out URL to a personal GitHub or other personal website at the top of your code. Code must be uploaded in PDF format and be only two pages in length. Strong programming supplements should consist of code, comments, and output.

- Import libraries
- Ingest data from csv
- Manage different data types
- Use your function for data analysis
- Visualize data
- Wrangle data
- Write your own function
